

# Single Phase Ultrafast Bridge Rectifiers

## DESCRIPTION

This series of high-current single-phase bridge rectifiers are constructed with hermetically sealed rectifiers built with the same design and construction techniques used in military applications for the upmost in reliability. These include voidless glass encapsulation and internal "Category 1" metallurgical bonds. These 35A ultrafast rectifier bridges are available in multiple working peak reverse voltage ratings per leg.

**PART NOMENCLATURE**

**SYMBOLS & DEFINITIONS**

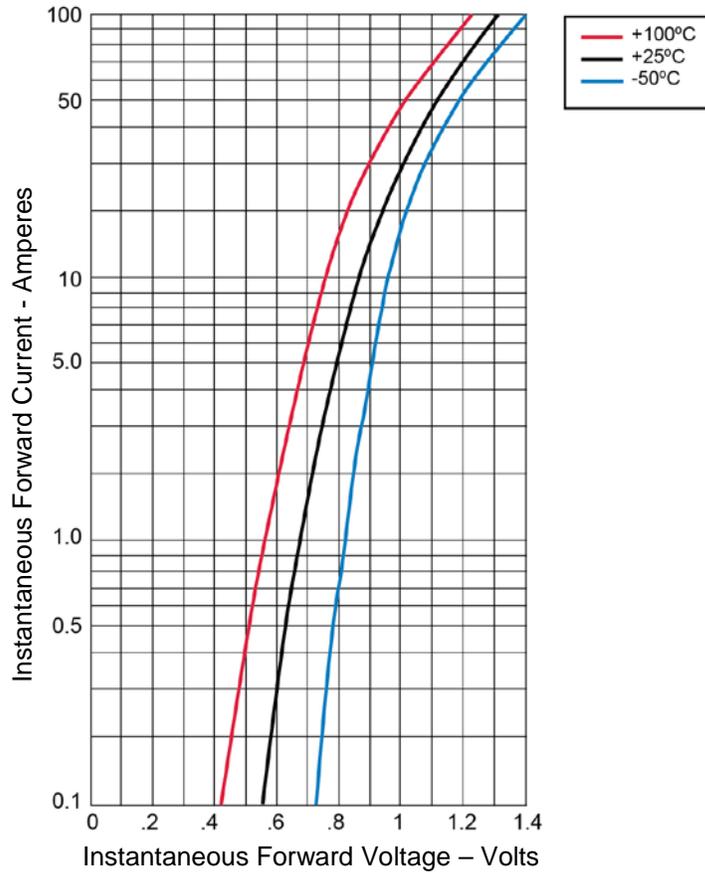

Symbol	Definition
$I_{FSM}$	Surge Peak Forward Current: The forward current including all nonrepetitive transient currents but excluding all repetitive transients (ref JEESD282-B)
$I_O$	Average Rectified Output Current: The Output Current averaged over a full cycle with a 50 Hz or 60 Hz sine-wave input and a 180 degree conduction angle.
$V_{FM}$	Maximum Forward Voltage: The maximum forward voltage the device will exhibit at a specified current.
$I_{RM}$	Maximum Reverse Current: The maximum reverse (leakage) current that will flow at the specified voltage and temperature.
$V_{RWM}$	Working Peak Reverse Voltage: The peak voltage excluding all transient voltages (ref JEESD282-B). Also sometimes known historically as PIV.
$t_{rr}$	Reverse Recovery Time: The time interval between the instant the current passes through zero when changing from the forward direction to the reverse direction and a specified decay point after a peak reverse current occurs.
