## Notice for TAIYO YUDEN products

Please read this notice before using the TAIYO YUDEN products.

#### REMINDERS

Product information in this catalog is as of October 2012. All of the contents specified herein are subject to change without notice due to technical improvements, etc. Therefore, please check for the latest information carefully before practical application or usage of the Products.

Please note that Taiyo Yuden Co., Ltd. shall not be responsible for any defects in products or equipment incorporating such products, which are caused under the conditions other than those specified in this catalog or individual specification.

- Please contact Taiyo Yuden Co., Ltd. for further details of product specifications as the individual specification is available.
- Please conduct validation and verification of products in actual condition of mounting and operating environment before commercial shipment of the equipment.
- All electronic components or functional modules listed in this catalog are developed, designed and intended for use in general electronics equipment.(for AV, office automation, household, office supply, information service, telecommunications, (such as mobile phone or PC) etc.). Before incorporating the components or devices into any equipment in the field such as transportation,( automotive control, train control, ship control), transportation signal, disaster prevention, medical, public information network (telephone exchange, base station) etc. which may have direct influence to harm or injure a human body, please contact Taiyo Yuden Co., Ltd. for more detail in advance. Do not incorporate the products into any equipment in fields such as aerospace, aviation, nuclear control, submarine system, military, etc. where higher safety and reliability are especially required.

In addition, even electronic components or functional modules that are used for the general electronic equipment, if the equipment or the electric circuit require high safety or reliability function or performances, a sufficient reliability evaluation check for safety shall be performed before commercial shipment and moreover, due consideration to install a protective circuit is strongly recommended at customer's design stage.

- The contents of this catalog are applicable to the products which are purchased from our sales offices or distributors (so called "TAIYO YUDEN's official sales channel").

  It is only applicable to the products purchased from any of TAIYO YUDEN's official sales channel.
- Please note that Taiyo Yuden Co., Ltd. shall have no responsibility for any controversies or disputes that may occur in connection with a third party's intellectual property rights and other related rights arising from your usage of products in this catalog. Taiyo Yuden Co., Ltd. grants no license for such rights.
- Caution for export

  Certain items in this catalog may require specific procedures for export according to "Foreign Exchange and Foreign Trade Control Law" of Japan, "U.S. Export Administration Regulations", and other applicable regulations. Should you have any question or inquiry on this matter, please contact our sales staff.

## WIRE-WOUND CHIP POWER INDUCTORS(BR SERIES)

<sup>• 
☐</sup> Please specify the inductance tolerance code. (M or K)

 $<sup>\</sup>frak{\%}$ ) The saturation current value (Idc1) is the DC current value having inductance decrease down to 30%. (at 20°C)

<sup>\*</sup>X) The temperature rise current value (Idc2) is the DC current value having temperature increase up to 40°C. (at 20°C)

### Wound Chip power inductor (BR-series)

#### RELIABILITY DATA

1. Operating Tempe	rature Range	
Specified Value	ALL OF BR-SERIES	-40~+105°C
Test Methods and Remarks	Including self-generated heat	
2. Storage Tempera	ture Range (after soldering)	
Specified Value	ALL OF BR-SERIES	-40~+85°C
Test Methods and Remarks	Please refer the term of "7.Storage condition	ns" in Precautions.
3. Rated current		
Specified Value	ALL OF BR-SERIES	Within the specified tolerance
4. Inductance		
Specified Value	ALL OF BR-SERIES	Within the specified tolerance
Test Methods and		HP 4285A or equivalent)
Remarks	Measuring frequency : Specified freq	
5. DC Resistance		
Specified Value	ALL OF BR-SERIES	Within the specified tolerance
Test Methods and Remarks	Measuring equipment : DC ohmmeter	(HIOKI 3227 or equivalent)
6. Self resonance fr	equency	
Specified Value	ALL OF BR-SERIES	Within the specified tolerance
Test Methods and Remarks		alyzer/material analyzer equivalent HP4191A, 4192A or equivalent)
7. Temperature cha		
Specified Value	ALL OF BR-SERIES	Inductance change : Within ±15%
Test Methods and Remarks	Based on the inductance at 20°C and Measu	red at the ambient of $-40^{\circ}\text{C} \sim +85^{\circ}\text{C}$ .
8. Resistance to the	e bendability	
Specified Value	ALL OF BR-SERIES	No damage.
Test Methods and	The given sample is soldered on the board ar	nd then the back side of the board is pushed until it bends 2mm like the figure.
Remarks		$40 \times 1.0$ mm (0.8mm thickness for 1608(0603) inductors)
		-ероху
	Thickness of soldering paste : 0.12m	nm
	Force Rod 10 20 R230	
	Board  Board  45±2mm  45±2mm

#### Wound Chip power inductor (BR-series)

systems, the medical equipment and soon.

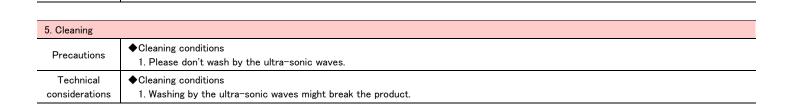

#### **■**PRECAUTIONS

# 1. Circuit Design Operating Ambient The products are premised on the usage for the general equipments like the office supply equipment, the telecommunications systems, the measuring equipment, the household equipment and so on. Please ask to TAIYO YUDEN's sales person in advance, if you need to apply them to the equipments or the systems which might have any influences for the human body, the property, like the traffic systems, the safety equipment, the aerospace systems, the nuclear control

2. PCB Design	
Precautions	◆Land pattern design 1. Please refer to a recommended land pattern.
Technical considerations	<ul> <li>◆Land pattern design</li> <li>Surface Mounting</li> <li>1. The conditions of the picking and placing should be checked in advance.</li> <li>2. The products are only for reflow soldering.</li> </ul>

3. Considerations	s for automatic placement
Precautions	◆Adjustment of mounting machine 1. Excessive physical impact should not be imposed on the products for picking and placing onto the PC boards. 2. Mounting and soldering conditions should be checked in advance.
Technical considerations	◆Adjustment of mounting machine  The products might be broken if too much stress is given for the picking and placing.

#### 4. Soldering 1. Please apply our recommended soldering conditions on the specification as much as possible. 2. The products are only for reflow soldering. 3. Please do not give any stress to a product until it returns in room temperature after reflow soldering. ◆Lead free soldering 1. Please check the adhesion, the solder temperature, the solderability and the shape of solder filet if the solder that is not in the Precautions specification is used. ◆Recommended conditions for using a soldering iron (NR10050 Type) Touch a soldering iron to the land pattern not to the product directly. The temperature of a soldering iron is less than 350degC. The soldering is for 3 seconds or less. ◆Reflow soldering 1. The product might break or might make the tombstoning, if the soldering conditions are too far from our recommended conditions. 5sec max Temperature [°C] -Peak: 260+0/-5°C Technical 200 considerations 30±10sec 100 230°C min 90±30sec

Heating Time (sec)

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

6. Handling	
Precautions	<ul> <li>◆Handling</li> <li>1. Keep the product away from any magnets.</li> <li>◆Cutting the PC boards</li> <li>1. Please don't give any stress of the bending or the twisting for the cutting process of PC boards.</li> <li>2. Please don't give any shock and stress to the products in transportation.</li> <li>◆Mechanical considerations</li> <li>1. Please don't give too much shock to the product.</li> <li>2. Please don't give any shock and stress to the products in transportation.</li> <li>◆The stress for picking and placing</li> <li>1. Please don't give any shock into an exposed ferrite core.</li> <li>◆Packing</li> <li>1. Please don't pile the packing boxes up as much as possible.</li> </ul>
Technical considerations	<ul> <li>✦ Handling</li> <li>1. There is a case that a characteristic varies with magnetic influence.</li> <li>✦ Cutting the PC boards</li> <li>1. Please don't give the bending stress or the twisting stress to the products because they might break in such cases.</li> <li>✦ Mechanical considerations</li> <li>1. The mechanical shock might break the products.</li> <li>2. The products might break depending on the handling in transportation.</li> <li>✦ Pick-up pressure</li> <li>1. The electrical characteristics of the products might be shifted by too much physical shock and stress.</li> <li>✦ Packing</li> <li>1. The products and the tape might break, if the packing boxes are piled up.</li> </ul>

Precautions	◆Storage  1. The packing boxes can be kept at the ambient which the temperature is from 0 to 40degC and the humidity is less than 70%.  2. The ambient temperature of less than 30degC is recommended not to get the tape and the solderability worse.  3. Please solder the products by a half year after they have been shipped.  Otherwise please use them after checking the solderability in advance.
Technical onsiderations	♦Storage  1. The ambient of high temperature or high humidity might accelerate to make the solderability and the tape worse.
